## Project Description

### What are the client's problems?

The client has experienced many difficulties in showcasing his work while applying for Internships and jobs. The company always wants to see your work, and submitting your work through emails is not that convenient for it doesn't allow beyond a certain size. Writing multiple emails to submit your work might leave a negative impression which you don't want. Sharing through your google drive again is too much work for the party to go through downloading, unzipping, and viewing them.

### How are you going to solve the problems?

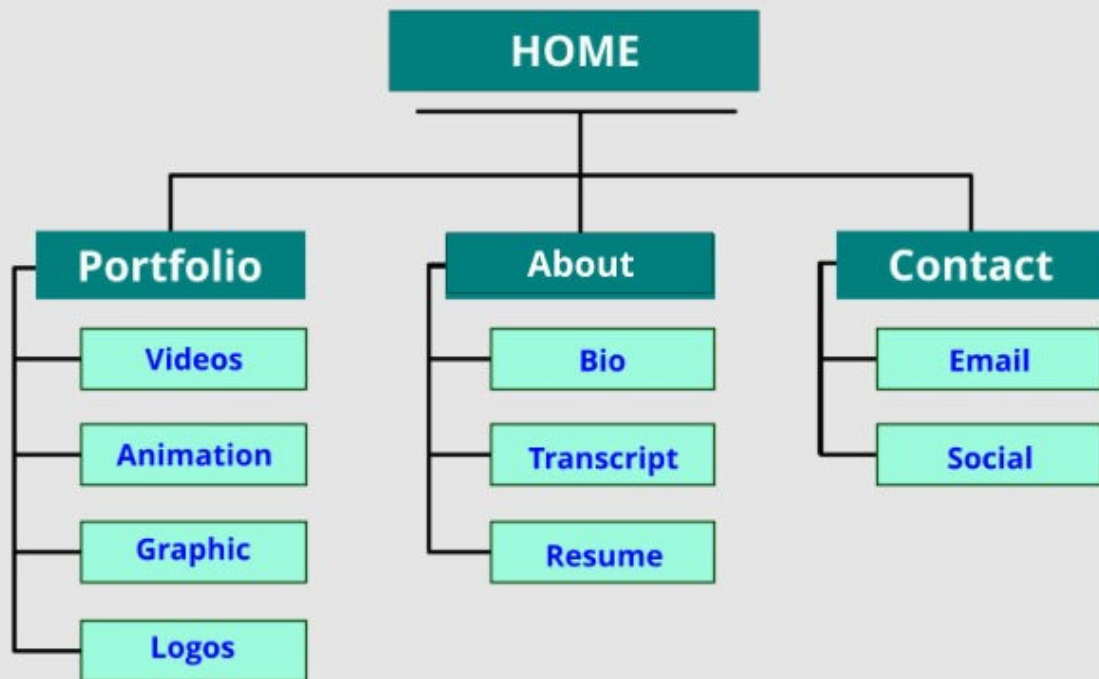

I am going to design a portfolio website that showcases all my work experience. With this website, not only, a client can show his all the past work experiences simply by sharing a link in his single email, but a company also can reach out to the client when they want. Also, as the client advances in his skills and work experience, he then can update these new sets of skills with all the previous companies that he is in contact with, as well as the one that client is currently working with, without even bothering them with the emails.

## Timeline

### How long will it take to finalize the project?

I would like to take some time to get the job done right. I want this portfolio to be intuitive, easy to navigate and comprehend so I would say two to three weeks.
